

CHANGING THE UNDER SEAT WEIGHT POST ON AB COASTER® CTL (SW & ABS SERIES)

Changing the under seat weight post on the AbCoaster CTL is a very easy task. You will need either a metric M8 or M10 allen key to accomplish this. Start by lifting the seat towards the back of the unit. You may wish to prop the seat up on something to hold it steady for you.

Serial numbers starting SW:

Older SW serial number series units have the bolts go directly into the support frame. Simply remove the two bolts anchoring the weight post from the bottom support bar.

You can re-use the hardware and now re-attach the new post where the old one was previously mounted. Test with a weight from the weight storage stack and you can proceed to use the machine again.

Serial numbers starting ABS:

Newer ABS serial number series units have nuts on top of the frame bar you will need to access with an adjustable crescent wrench. Depending on the direction the nuts were installed, you may need to remove the seat to accomplish this. (Remove the seat pad; 4 bolts at the corners, then you will be able to access the four mounting bolts for the Seat Mounting Plate.) Once you have access to the bolts and nuts that hold the weight post on, you can detach it and, reusing the hardware, attach the new one.

If there are questions during an install for a tech, PLEASE do not hesitate to call us and discuss! We are happy to assist and make sure that every install goes smoothly. We are happy to hop on FaceTime or Zoom and video chat to make sure things are set up correctly. Just call 866-219-5335 Option 5 and we can set up a video conference.
